Science winds the helices of knowledge with the bids of prediction, exploration, evolution and explanation to shape the nature in a specific and universal configuration. Time is precious for all the living creatures. Research is the potential ability of human beings and is adapted by them to conquer their existence by the “natural selection”. The evolutionary route of science is subjected to spontaneous journey through the advancement of its discoveries from ancient findings to modern interdisciplinary branches. Aspiration of discoveries of the scientists makes research to develop trends of advancement to unwind the hidden truth of the world. Applicability of the cardinal discoveries has been increasing in recent era with implementation of technocratic tools.

We solicit and welcome all of our research colleagues in the regime of successive science research. International Journal of Advanced Research Trends in Science (IJARTS) provides continuous publication of original manuscripts to enhance the impact and significance of scientific research. Diversified fields of science that extend from natural, physical, and environmental science to the professional streams like medical, engineering and agricultural sciences *etc.* are considered in IJARTS to maximize the applicability of scientific research. The journal will focus on the advancement of modern scientific research with innovation of novel theories, new technologies and updated scientific models.

We are introducing the inaugural first issue of the international research journal in the name of International Journal of Advanced Research and Trends in Science published by AURA INTERNATIONAL. This is an online, bi-annual, peer-reviewed and multi-faceted science research journal. The journal depicts a bunch of features like rapidity in communication, clarity in status upgradation, frequency in peer review, integrity of exchanging global ideas, intensity of innovations, diversity of technocratic information and applicability of scientific discovery. We are endeavouring for a glorious future of the researchers on a platform with full of motivation, strength of techniques and purvey full support regarding quality research publication.
